

DEPARTMENT OF GEOCHEMISTRY

THEMATIC RESEARCH FOCUS

- COAL AND ORGANIC PETROLOGY
- MINERALOGY AND PETROGRAPHY OF MAGMATIC ROCKS
- ORGANIC AND INORGANIC CHEMISTRY OF GEOMATERIALS
- SORPTION AND POROSIMETRIC ANALYSES

Spherical, porous char particle from a burnt-out lignite waste heap

JOIN RESEARCH CENTER

The joint Laboratory of Sorption and Porosimetric Analyses was established by the Institute of Rock Structure and Mechanics together with the Faculty of Science, Charles University. Joint research is focused on the porous texture of rock materials and their changes due to environmental conditions and technological processes.

MAIN SCOPE OF RESEARCH

- Study of paleoenvironmental and palaeoclimatic conditions, and weathering processes of sedimentary basins
- Coalification and dispersed organic matter in relation to diagenesis and rock metamorphism
- Investigation on the carbon dioxide and methane sorption capacity of porous natural and artificial materials in dependence on their properties
- Development and study of new ordered micromesoporous carbon materials as adsorbents for CO₂

- Investigation of the sensing properties of chemiresistors
- Mineralogy and geochemistry of accessory minerals in granitic rocks
- Sn-W and U mineralization connected with granitic rocks
- Products of incomplete combustion, carbonaceous particles, hydrocarbons, and toxic elements in environment and sediments
- Detection of modification of rock fabric by conservation agents used for hydrophobisation and consolidation of stones
- Investigation of the properties of the corrosion layer on nuclear fuel cladding pipes

KEY RESEARCH EQUIPMENT

- NIKON stereoscopic microscope
- NIKON microscope with LUCIA image analysis system, Laboratory Imaging
- Olympus BX51 optical microscope with a Carl Zeiss MK3 Photomultiplier under both reflected light and fluorescence regimes
- Carl Zeiss Axio Imager M2m optical microscope with a spectrometer
- DuraScan - 20 microhardness tester (Struers)
- Trace gas chromatograph – DSQ II single quadrupole mass spectrometer (ThermoElectron)
- Trace 1310 gas chromatograph – ISQ single quadrupole mass spectrometer (ThermoElectron)

Hiden IGA-100 Intelligent Gravimetric Analyser, Hiden Isochema

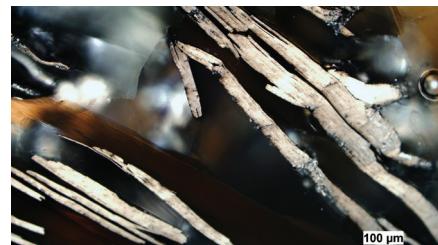

PASCAL 140 + PASCAL 440 EVO mercury porosimeters, Thermo Scientific

ACHIEVEMENTS

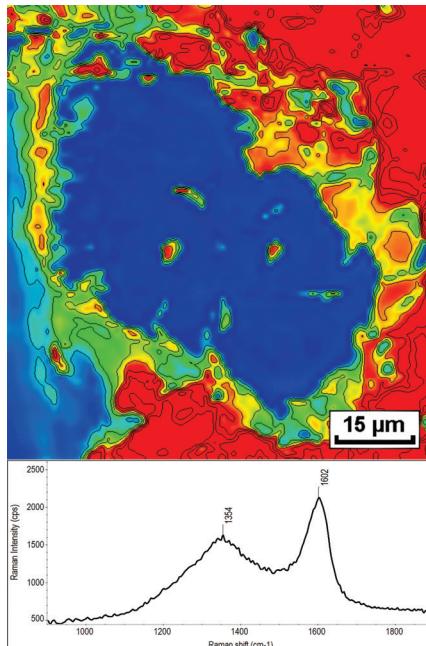

● PETROLOGY, GEOCHEMISTRY AND THERMAL MATURITY, AND PALEOENVIRONMENTAL HISTORY OF MIRES AND SEDIMENTS
