

DEPARTMENT OF GEOCHEMISTRY

INSTITUTE OF ROCK STRUCTURE AND MECHANICS
of the Czech Academy of Sciences

THEMATIC RESEARCH FOCUS

- COAL AND ORGANIC PETROLOGY
- MINERALOGY AND PETROGRAPHY OF MAGMATIC ROCKS
- ORGANIC AND INORGANIC CHEMISTRY OF GEOMATERIALS
- SORPTION AND POROSIMETRIC ANALYSES

SEM photomicrograph of corphohuminite and resinite bodies in cells of coalified wood tissue from the trunk in the Bilina Mine of the Most Basin

JOIN RESEARCH CENTER

The joint Laboratory of Sorption and Porosimetric Analysis was established between the Institute of Rock Structure and Mechanics and the Faculty of Science, Charles University. Joint research is focused on the porous texture of rock materials and their changes due to environmental conditions and technological processes.

MAIN RESEARCH SUBJECTS

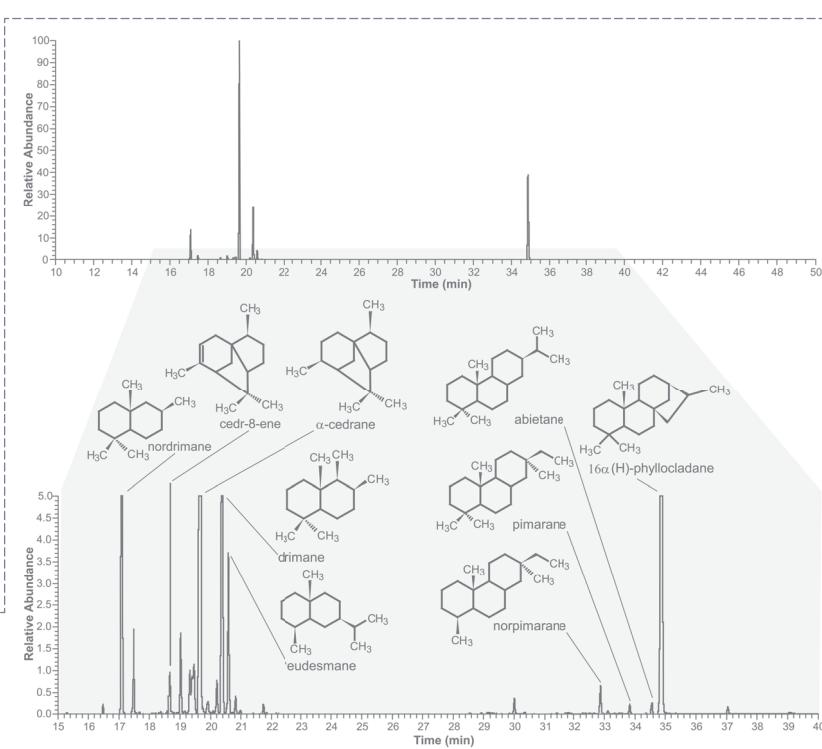

- Studies of paleoenvironmental and palaeoclimatic conditions, and the weathering processes of sedimentary basins
- Coalification and dispersed organic matter in relation to diagenesis and metamorphism of rocks
- Investigation of the properties of the corrosion layer on cladding pipes of nuclear fuel material
- Products of incomplete combustion, carbonaceous particles and hydrocarbons in environmental samples and sediments
- Mineralogy and geochemistry of selected accessory minerals and studies of their phase stabilities under magmatic and postmagmatic conditions
- Petrology and geochemistry of granite suites of the Bohemian Massif
- Detection of modifications of rock fabric by conservation agents used for hydrophobisation and consolidation of stones
- Investigation into the carbon dioxide and methane sorption capacities of coals and shales, depending on their properties

KEY RESEARCH EQUIPMENTS

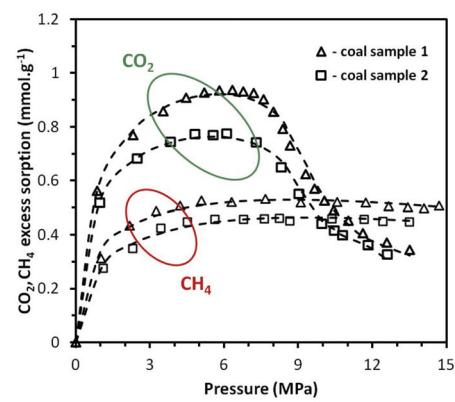

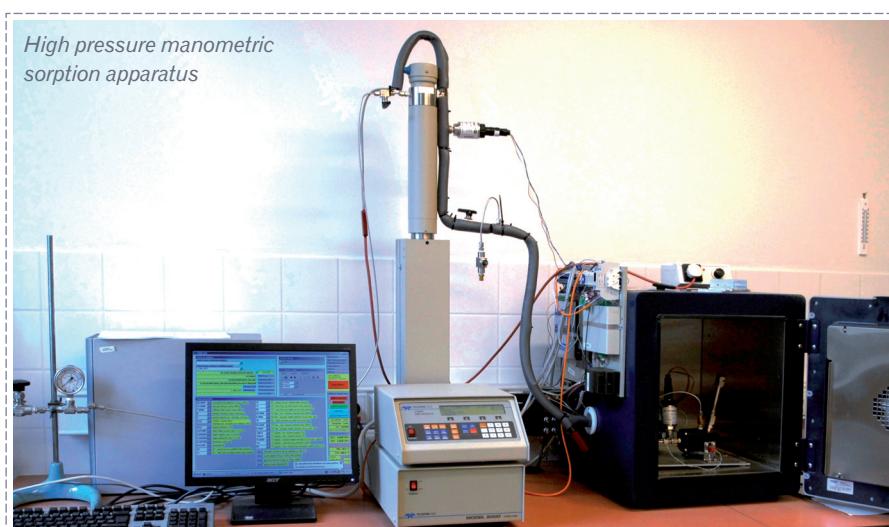

- Axio Imager 2 Research Microscope
- NIKON stereoscopic microscope
- NIKON microscope with LUCIA image analysis system, Laboratory Imaging
- Olympus BX51 microscope with a QDI spectrophotometer system, CRAIG Technologies
- Olympus BX51 microscope for transmitted light with fluorescence mode and polarized light
- DuraScan-20 microhardness tester, Struer Gas chromatograph mass spectrometer
- ThermoElectron Trace-DSQ II
- CDS 5000 Pyroprobe Unit
- Pascal 140+240 Porotec POROSIMETER
- SORPTOMATIC 1990, Thermo Scientific
- IGA 002 Intelligent Gravimetric Analyser
- Hiden – gas and vapour sorption
- High pressure sorption apparatus, up to 15 MPa (original design and construction)
- Quantachrom pycnometer

Olympus BX51 microscope with QDI spectrophotometer system, Craig Technologies, in fluorescent mode

Total ion chromatogram of the aliphatic fraction of a fossil wood sample extract from the Miocene
“Stump Horizon” in the Bilina open pit mine
of the Most Basin

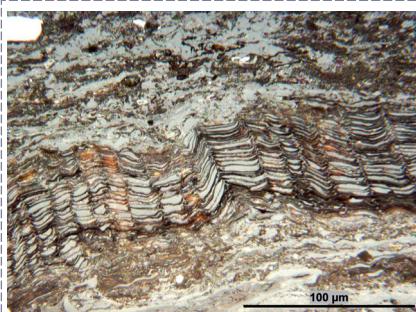

High pressure sorption isotherms of carbon dioxide and methane on coal samples at 45 °C

ACHIEVEMENTS (LAST 5 YEARS)

● Petrology and organic geochemistry of mires and sediments

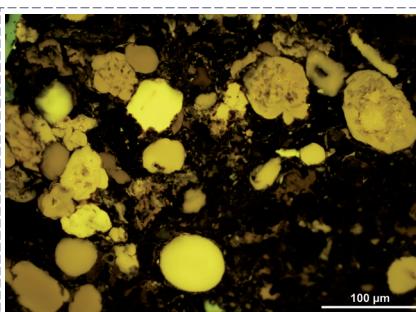

V. Suchý, I. Sýkorová, M. Havelcová, V. Machovič, A. Zeman, H. Trejtnarová, 2013. Cementation and blackening of Holocene sands by peat-derived humates: a case study from the Great Dune of Pilat, Landes des Gascogne, Southwestern France. International Journal of Coal Geology 114, 19–32.

Texture of bark tissue in lignite from the Zittau Basin

M. Havelcová, I. Sýkorová, A. Bechtel, K. Mach, H. Trejtnarová, M. Žaloudková, P. Matysová, J. Blažek, J. Boudová, J. Sakala, 2013. "Stump Horizon" in the Bílina Mine (Most Basin, Czech Republic) – GC-MS optical and electron microscopy in identification of wood biological origin. International Journal of Coal Geology 107, 62–77.

M. Havelcová, I. Sýkorová, H. Trejtnarová, A. Šulc, 2012. Identification of organic matter in lignite samples from basins in the Czech Republic: Geochemical and petrographic properties in relation to lithotype. Fuel 99, 129–142.

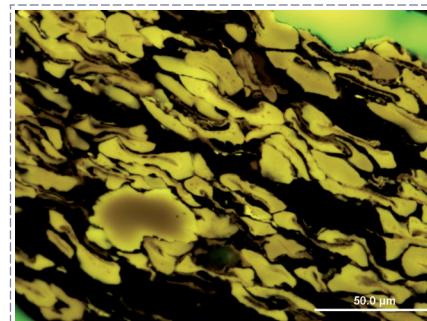

Mixture of resinite bodies in the detrital matrix of the liptobiolite from the Sokolov Basin, fluorescent mode

● Natural sorbents for removal of toxic elements from waste waters

M. Havelcová, J. Mizera, V. Machovič, L. Borecká, O. Přibyl, I. Krausová, 2013. Sorption of heavy metals on lignite impregnated with chitosan. Acta Geodyn. Geomater. 10, 105–110.

M. Havelcová, J. Mizera, I. Sýkorová, M. Pekař, 2009. Sorption of metal ions on lignite and the derived humic substances. Journal of Hazardous Materials 161, 559–564.

Yellow fluorescent sporinite in bituminous coal

● Contamination by carbonaceous particles of anthropogenic origin

M. Havelcová, A. Melegy, S. Rapant, 2014. Geochemical distribution of polycyclic aromatic hydrocarbons in soils and sediments of El-Tabbin, Egypt. Chemosphere 95, 63–74.

J. Syslová, I. Sýkorová, M. Havelcová, J. Száková, H. Trejtnarová, B. Kotlík, 2012. Toxicologically important trace elements and organic compounds investigated in size-fractionated urban particulate matter collected near the Prague highway. Science of the Total Environment 437, 127–136.

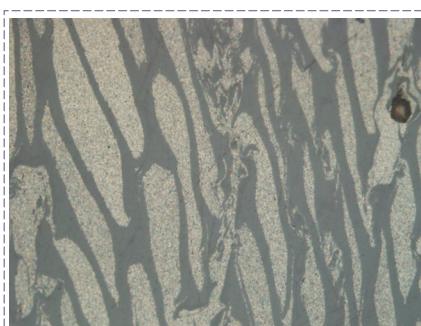

I. Sýkorová, M. Havelcová, A. Zeman, H. Trejtnarová, 2011. Carbon air pollution reflected in deposits on chosen building materials of Prague Castle. Science of the Total Environment 409, 4606–4611.

● Effect of porous structure on technological process

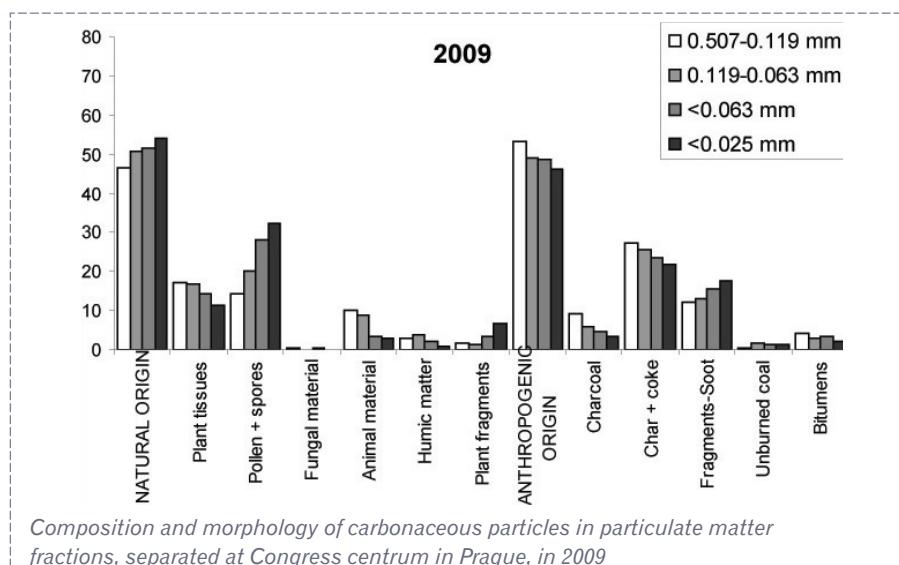

R. Přikryl, Z. Weishauptová, 2010. Hierarchical porosity of bentonite-based buffer and its modification due to increased temperature and hydration. Applied Clay Science 47, 163–170.

J. Medek, Z. Weishauptová, 2009. Gel structure of the corrosion layer on cladding pipes of nuclear fuel. Journal of Nuclear Materials 393, 306–310.

R. Přikryl, Z. Weishauptová, M. Novotná, J. Přikrylová, A. Šťastná, 2011. Physical and mechanical properties of the repaired sandstone ashlar in the facing masonry of the Charles Bridge in Prague (Czech Republic) and an analytical study for the causes of its rapid decay. Environmental Earth Sciences 63, 1623–1639.

Telinite and macrinite in bituminous coal from the Czech part of the Upper Silesian Basin

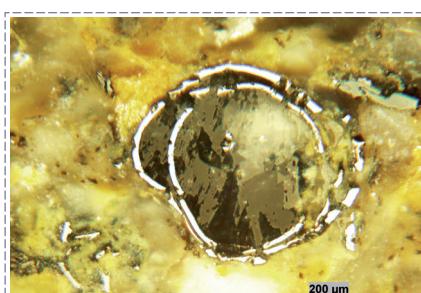

Composition and morphology of carbonaceous particles in particulate matter fractions, separated at Congress centrum in Prague, in 2009

● Effect of coal properties on CO₂ sorption

Z. Weishauptová, I. Sýkorová, 2011. Dependence of carbon dioxide sorption on the petrographic composition of bituminous coals from the Czech part of the Upper Silesian Basin, Czech Republic. Fuel 90, 312–323.
